DEVIXO SOLUTIONS

Web Development Internship Program

TASK 01

Professional Personal Portfolio Website

Project Report

Detail	Information
Student Name	Sania Shoukat
Internship Domain	Web Development
Task Number	Task 01
Technologies	HTML, CSS
University	University of Agriculture Faisalabad
Date	October 2026

1. Objective

The objective of this task was to design and build a modern, professional and fully responsive personal portfolio website using only HTML5 and CSS3. The website had to show my profile, technical skills, education, projects and contact information in a clean and attractive way.

The task also had some rules. I could not use Bootstrap, Tailwind CSS or any other UI framework, and I could not use a downloaded template. So all the HTML and CSS in this project is written by me from scratch. The website also had to work properly on desktop, laptop, tablet and mobile screens without breaking the layout.

Apart from the required sections, I also added an Experience section which shows the internships I have completed, because I thought it is useful for anyone who visits my portfolio.

2. Technologies Used

This website is built with only two core technologies. No JavaScript and no framework was used. Everything that moves or changes on the page is done with CSS.

Technology / Tool	How I used it
HTML5	Page structure with semantic tags such as header, nav, main, section, article and footer.
CSS3	All styling, Flexbox and Grid layouts, media queries for responsive design, hover effects, transitions and animations.
CSS Variables	Stored the colour palette and fonts in one place (:root) so the theme stays consistent.
Visual Studio Code	Code editor used to write and organise the project files.
Web browser tools	Used the browser developer tools to test the layout at different screen sizes.
Git and GitHub	Version control and hosting the project repository.

3. Website Structure

The website is a single page with a navigation bar at the top. Each link in the navbar scrolls down smoothly to its section. The sections come in the following order.

Section	What it contains
Home	Hero section with my name, a short tagline, a short introduction, my profile picture and two call-to-action buttons.
About	A short personal introduction, my academic background and my career interests.
Skills	Skill cards with progress bars for Front-End, Back-End and Tools. Other languages I know (Python, C++, C, C#, Dart, SQL) are shown as small chips.

Section	What it contains
Education	Matriculation, Intermediate and BS Computer Science with institute name and study period.
Experience	A timeline of my internships with role, company, dates and links to certificates and recommendation letters.
Projects	Six project cards, each with a thumbnail, short description, key features, technologies used and a live demo or GitHub link.
Contact	Email, location, social links (GitHub and LinkedIn) and a contact form with name, email, subject, message and a submit button.
Footer	My name, a short bio, quick navigation links, social links, copyright text and a back to top link.

Folder structure

The project files are kept in a clean folder structure like this:

```
devixo-portfolio/

    ├── virexo-certificate.jpg
    └── virexo-recommendation-letter.pdf
```

4. Design Approach

Colour theme

I wanted the website to look professional, so I chose a dark charcoal and gold combination with white and light grey backgrounds. The same colours are used on every section so the website looks consistent. The text colours on the light and dark backgrounds have good contrast, so everything is easy to read.

Colour	Code	Where it is used
Dark charcoal	#16181D	Navbar, hero section, footer, main headings
Gold	#C9A24A	Buttons, highlights, underlines and timeline dots
Dark gold	#8A6616	Small accent text on light backgrounds
White	#FFFFFF	Main section backgrounds and cards

Colour	Code	Where it is used
Light grey	#F3F3F1	Alternate section backgrounds

Typography

I used one serif font (Georgia) for headings and one sans-serif font (Segoe UI) for normal text. Using only two fonts keeps the design simple and readable.

Layout and spacing

The page layouts are built with CSS Grid and Flexbox. Every section has the same padding and a centered container with a maximum width of 1100px, so the spacing looks equal everywhere. The section backgrounds change between white and light grey, which makes it easy to see where one section ends and the next begins.

Responsive design

The website uses media queries at three breakpoints: 900px, 700px and 560px. On smaller screens the project cards change from three columns to two and then to one column, the hero section stacks vertically and the contact section becomes a single column. Below 700px the navigation links turn into a menu button. I checked the layout at desktop, laptop, tablet and mobile widths and the page does not scroll sideways.

Animations and hover effects

I kept the animations simple so they look smooth and not too much. Buttons, navigation links, skill cards, project cards, experience cards and footer links have hover effects. The cards also fade in when they come into view while scrolling. For people who do not want animations, I added a prefers-reduced-motion rule that turns them off.

5. Website Features

- Fully responsive layout for desktop, laptop, tablet and mobile.
- Sticky navigation bar with hover underline effect, and links that work for every section.
- Mobile navigation menu made with CSS only (a hidden checkbox), without JavaScript.
- Hero section with name, tagline, introduction, profile picture and call-to-action buttons.
- Skills shown with progress bars and skill chips.
- Education section with a clear list of my academic history.
- Experience section with a timeline and links to certificates and recommendation letters.

- Six professional project cards with thumbnail, description, features, technology tags and link.
- Contact form with name, email, subject, message and submit button (it opens the email app using mailto).
- Footer with bio, quick links, social links and copyright.
- Smooth scrolling between sections.
- Hover animations on buttons, links, cards and social links.
- Scroll animations for cards and skill bars using CSS only.
- Semantic HTML, meaningful class names and clean formatted code.

6. Code Screenshots

This section shows some important parts of my code, taken from Visual Studio Code.

HTML: navigation bar

```
12
13  <header class="site-header">
14    <nav class="navbar" aria-label="Main navigation">
15      <a href="#home" class="logo">Sania Shoukat</a>
16      <input type="checkbox" id="navToggle" class="nav-check" aria-label="Toggle menu">
17      <label for="navToggle" class="menu-toggle" aria-hidden="true">
18        <span></span><span></span><span></span>
19      </label>
20      <ul class="nav-links">
21        <li><a href="#home">Home</a></li>
22        <li><a href="#about">About</a></li>
23        <li><a href="#skills">Skills</a></li>
24        <li><a href="#education">Education</a></li>
25        <li><a href="#experience">Experience</a></li>
26        <li><a href="#projects">Projects</a></li>
27        <li><a href="#contact">Contact</a></li>
28      </ul>
29    </nav>
30  </header>
31
32  <main>
```

CSS: colour variables and smooth scrolling

style.css > :root

```css

:root {
  --ink: #16181d;
  --ink-2: #22262e;
  --gold: #c9a24a;
  --gold-dark: #8a6616;
  --paper: #ffffff;
  --surface: #f3f3f1;
  --line: #e2e2de;
  --text: #23262d;
  --muted: #5d626b;
  --font-head: Georgia, 'Times New Roman', serif;
  --font-body: 'Segoe UI', Arial, sans-serif;
}

* {
  margin: 0;
  padding: 0;
  box-sizing: border-box;
}

html {
  scroll-behavior: smooth;
  scroll-padding-top: 70px;
}

```

Figure 2: CSS variables for the colour theme and smooth scrolling

CSS: project cards and hover effect

```css

.projects-grid {
  display: grid;
  grid-template-columns: repeat(3, 1fr);
  gap: 22px;
}

.project-card {
  display: flex;
  flex-direction: column;
  background-color: var(--paper);
  border: 1px solid var(--line);
  border-radius: 8px;
  overflow: hidden;
  transition: transform 0.3s ease, box-shadow 0.3s ease, border-color 0.3s ease;
}

.project-card:hover {
  transform: translateY(-6px);
  border-color: var(--gold);
  box-shadow: 0 14px 28px rgba(22, 24, 29, 0.14);
}

```

Figure 3: Project grid, project card and its hover effect

CSS: responsive layout with media queries

```
1012
1013  @media (max-width: 900px) {
1014    .projects-grid { grid-template-columns: repeat(2, 1fr); }
1015
1016    .contact-wrapper { grid-template-columns: 1fr; }
1017  }
1018
1019  @media (max-width: 700px) {
1020    .navbar { padding: 12px 20px; }
1021    .menu-toggle { display: flex; }
1022
1023    .nav-links {
1024      position: absolute;
1025      top: 100%;
1026      left: 0;
1027      right: 0;
1028      flex-direction: column;
1029      gap: 0;
1030      max-height: 0;
1031      overflow: hidden;
1032      background-color: var(--ink);
1033      transition: max-height 0.3s ease;
1034    }
1035
1036    .nav-check:checked ~ .nav-links { max-height: 400px; }
1037
1038    .nav-links a {
```

9. Project Screenshots

The Projects section shows six projects. Five of them are front-end projects with live links and one is a full-stack project.

1. Virexo Innovations

Website of a digital engineering studio. Technologies: HTML5, CSS3, JavaScript.

Link: https://virexo-innovations-digital.vercel.app/

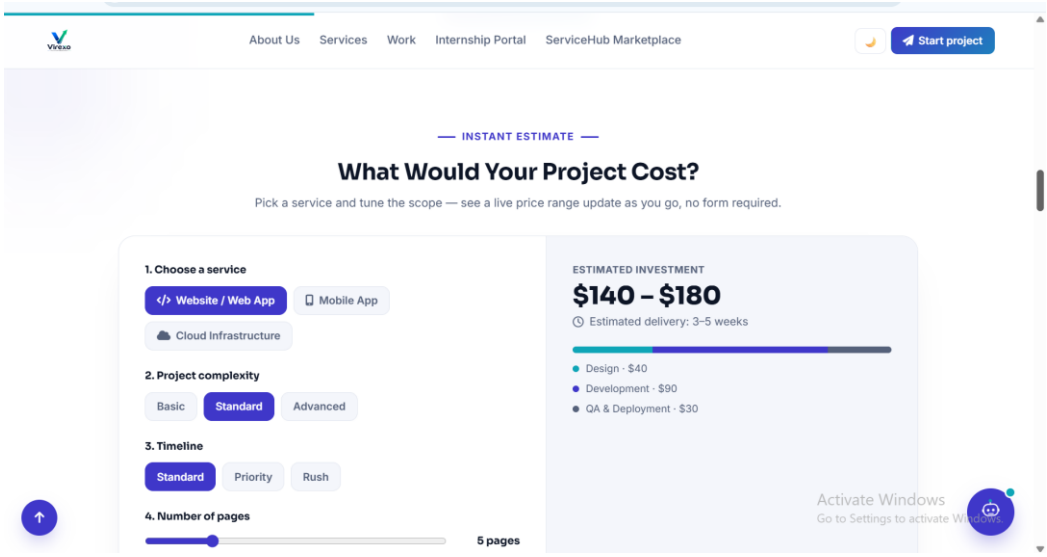

Figure 18: Virexo Innovations

2. Inkline - AI Resume Builder

A resume builder with live preview and templates. Technologies: HTML5, CSS3, JavaScript.

Link: https://inkline-resume-builder.vercel.app/

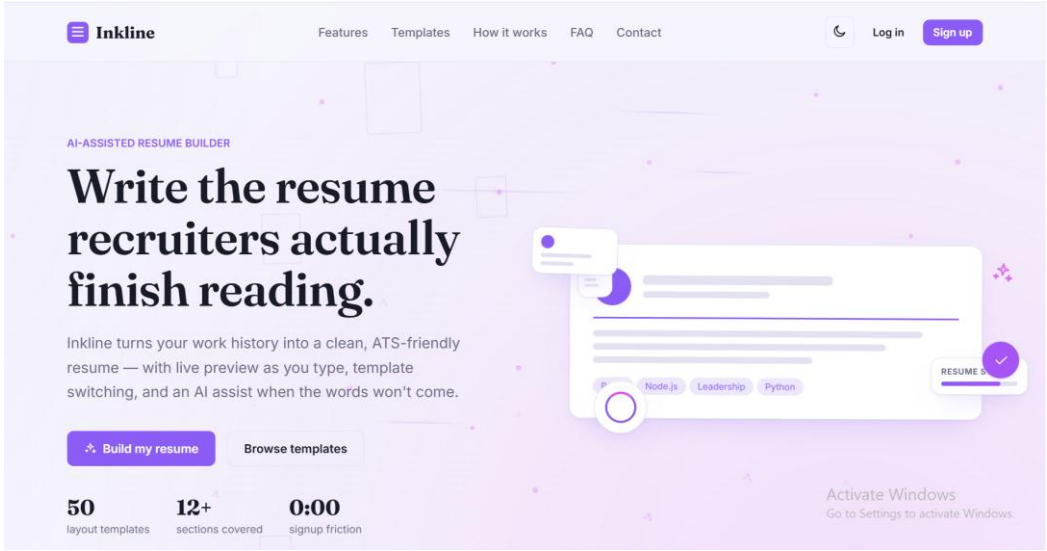

Figure 19: Inkline - AI Resume Builder

3. IronVault

Gym management system with admin, staff and member logins. Technologies: HTML5, CSS3, JavaScript.

Link: https://ironvault-gym-sand.vercel.app/

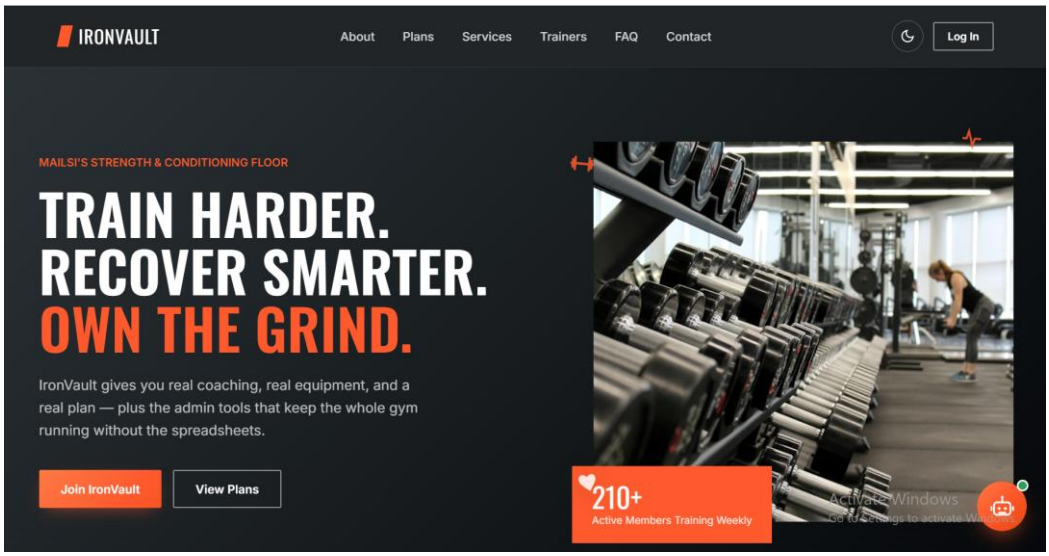

Figure 20: IronVault

4. Careerly

A job portal for finding jobs and hiring. Technologies: HTML5, CSS3, JavaScript.

Link: https://jobportal-mocha-seven.vercel.app/

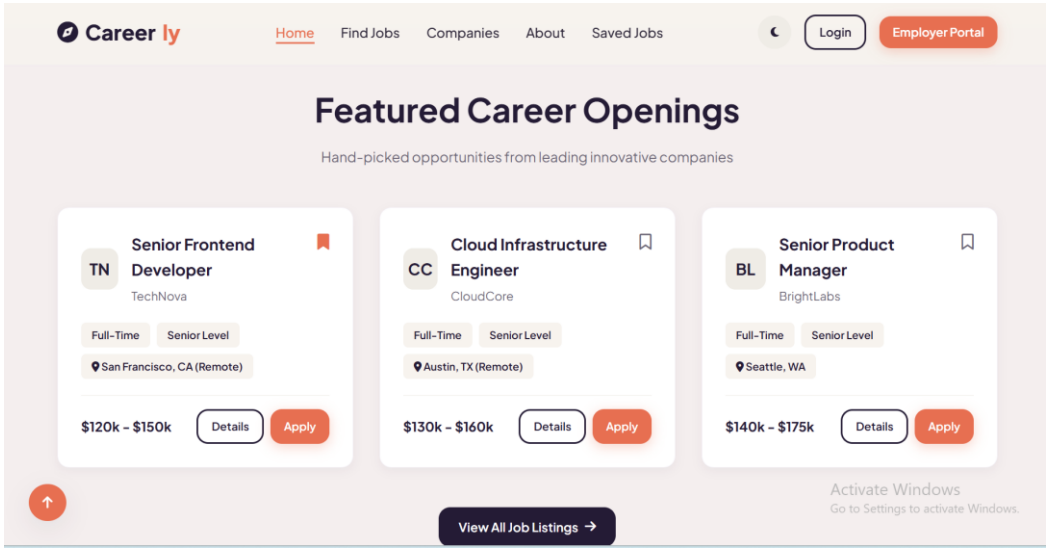

Figure 21: Careerly

5. Velora Drive

A premium car rental platform. Technologies: HTML5, CSS3, JavaScript.

Link: https://carrenntal-platform.vercel.app/

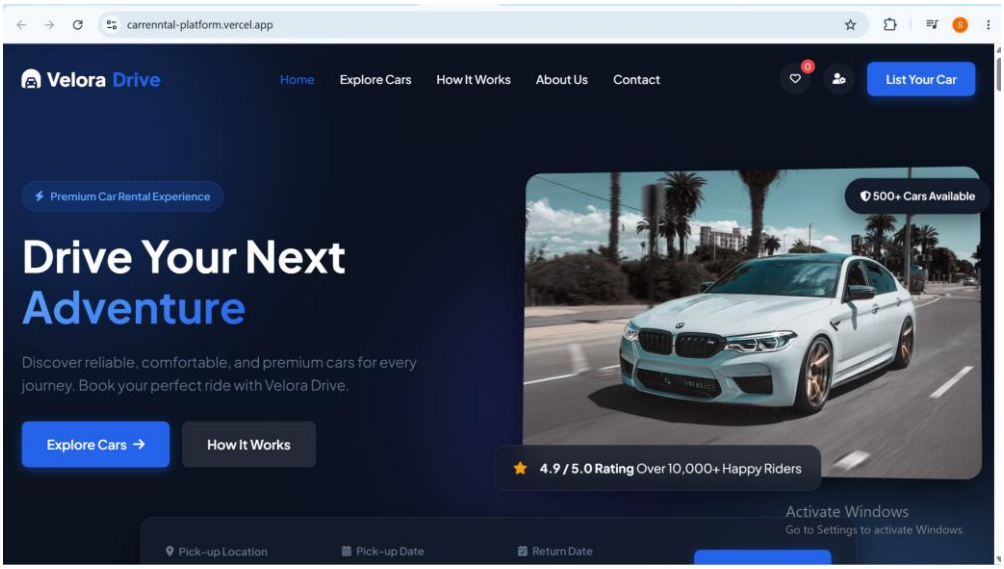

Figure 22: Velora Drive

6. CopyCoffee

Full-stack coffee shop website with ordering and rewards. Technologies: Node.js, Express, MongoDB.

10. Conclusion

In this task I built my personal portfolio website using only HTML5 and CSS3. The website has all the required sections: Home, About, Skills, Education, Projects and Contact, and I also added an Experience section. It has a navigation bar, a hero section, skill cards, project cards, a contact form and a footer, and it works on desktop, tablet and mobile screens.

While doing this task I learned how to plan a page layout with Flexbox and Grid, how to make a website responsive with media queries, and how to do hover effects, animations and even a mobile menu with CSS only. I also learned how important it is to keep the colours, fonts and spacing the same on every section so the website looks professional. Writing clean code with meaningful class names and organising the files in folders also made the project easier to manage and update.

Overall this task helped me improve my front-end skills and gave me a portfolio that I can share with others and keep updating with my new projects.
